

# NEW COMPOSITE MATERIALS FOR ENVIRONMENTAL APPLICATIONS (NKMEA)

**is co-financed by the European Union**

The objective of the project, which includes three partial research intents, is a pre-application research in the area of development, preparation, optimisation and testing of application of special composite materials that are capable of detecting, respectively removing, dangerous materials in water, air, ground and industrial plants. These special materials will allow increase in quality of life, safety for inhabitants and attractiveness in the city of Ostrava. The application sphere and various safety units can use the results of the project.
